

This fish is a trout. Look at its fins. How are they different from other fish?

Iowa has three kinds of trout. Draw markings on your fish to make it a native brook trout, brown trout, or rainbow trout.

Trout need cool, clean water to survive. Trees and native grasses along the banks of a stream hold the banks in place, filter water coming into the stream, and shade the water to keep it cooler. Draw trees and tall grasses along the shore to make a better home for the fish.
